
HCI Assignment 1

Paper prototype for UI for website for the blind

Prerana Sirigeri, PES1201701497

Rachana B Karrenavar, PES1201700653

Shreya Banerjee, PES1201700198

Things kept in mind while making the UI

- Audio assistance.
- Simple, less crowded UI with least amount of clutter.
- Text-to-speech input.
- Use of screen reading software to navigate the web such as Job Access With Speech (JAWS).
- For elements that aren't relevant for a vision-impaired user, such as a decorative bullet, use empty alt-text. Screen reading software knows not to read this code and will skip over it. The same applies to images next to a link.

Things kept in mind while making the UI

- The most important information is at the top of the web page or at the beginning of a paragraph.
- Tabindex attribute should be accessible in forms.
- The page with forms should not have a lot of text.
- “More information on product X” is better than “more info” or “click here”.
Purpose of each link should be clear in itself.
- Should be integrated with the normal website.
